CANDIDATE'S PERSONAL STATEMENT

My Message:

I have been participating in the work of the HKIA council and various committee groups for the past 11 years, particularly for Hong Kong urban planning, build environment, regulation, land strategy, development at Bay Area, organizing events and competitions for our young member. Last year, due to the Covid-19 situation, HKIA is not as active as before and our institute may not up to our member expectation. This situation encouraging me to run for the council of HKIA this year.

HKIA is necessary to review the stand in between professional, public and government. In many aspects, especially to maintain our professional as well as the leader of the construction field. This is the time to change and I will focus on how to maintain our leadership of the construction field this term. I wish I can convey another angle of view and difference opinion to the council as individual, not as a team and as a representative for our members.

For the previous terms of council member, I have been voiced out for the young generation in the council. And I have been organized various competitions for our young member to precipitate. For the coming term, I would like to continue the work for our young architect and create more chance and platform for the young generation and small/medium practice.

If I success to be elected to serve Council, I would like to offer my experience for the past 11 years as HKIA council and committee group member in bridging all generations of our member and HKIA with passion and vision. I will work with architects from different generations together to make a break through that we need for our profession, especially to maintain our professional and the leader of the construction field.

I will continuous to do my best working with council and looking forward to your support. Thank you.

My Vision:

- | | |
|-------------------|--|
| Public: | Explore the possibility of HKIA to more vocal and participate in our Hong Kong community problem in related to architecture and enhance our living environment |
| Social Status: | Maintain our professional and the leadership among the construction field |
| Young Architects: | Create more chance and platforms for the young generation |
| Practices: | Solve fee diving and create more opportunities for our practices internationally |
