| Huangdong Engineering Exploration & Design Association (广东省工程勘察设计行业协会) Honorary Council Member | 2020-Present |
| CIC BIM Competition Mentor | 2021-Present |

CANDIDATE'S PERSONAL STATEMENT

I practiced in both HK, Macau and PRC projects in the past decade because of the opportunities to explore and involve in larger scale and wider diversity of projects. I earned huge experience, knowledge and skills in handling over complicated and complex projects. Also, I took the chance to introduce and export HK high quality and exclusive international standard professional services and PRC is an excellent stage to take the first step.

I met potential parties in PRC including the local design institutes, local construction associations, government departments in different cities who are interested in high quality professional consultancy and construction services. At the time of promoting “建築師負責制” & “全過程諮詢” in China, I am invited to introduce how HK architects and practitioners in the industry are well trained and experienced. I also involved in preparing reports of recommendation and suggestion on the transformation of architectural and construction practices in QianHai. Taking this chance, I am also looking to further promote HK architects with “建築師負責制” & “全過程諮詢” to GBA as well as other cities of China.

Candidate's Statement

Being an architectural professional and pioneer of transformation, I lead my team to adapt the use of Building Information Management (BIM) since 2014 and complete the course BIM ISO19650 in 2019. In the past years, I learnt a lot from numerous trials and mistakes and surely we had a tough time of abandoning the traditional mindset and habit. With the aid of digital transformation and BIM, I led the team to develop a brand-new service of project and information management in the whole life cycle of construction projects.

Aiming to encourage the other practitioners of this revolution to achieve the success, I am willing to share our failures and successes, problems we faced and solutions we sought with the international developers and professional consultants as a pioneer of using BIM in construction projects. Besides holding regular in-house sharing sessions and workshops, I held a sharing session of BIM implementation with several developers including Hang Lung Properties and Vanke, architectural practice in Macau etc. Furthermore, I held public webinars in LWK+ regarding "Innovative Integrated Project Delivery" and public sharing in Graphisoft regarding "Ideas for Green Building Assessment in BIM".
